

A diagram showing a vertical channel defined by two parallel lines that are slightly slanted. A horizontal line extends from the left side to the inner boundary of the channel. A rectangular box is centered within the channel, containing the text "10-10" in red. Below the box, there are two small circles with a plus sign inside, one on each boundary line. A horizontal line also extends from the left side to the inner boundary of the channel, positioned below the second circle.

$$10-10$$

10-11

The image shows a technical drawing of a tapered shaft on the left side. The shaft is represented by two parallel lines that converge towards the top. There are two small circles with a cross inside, positioned on the shaft. A horizontal line extends from the bottom of the shaft to the right edge of the page. Another horizontal line extends from the shaft to the right, positioned higher than the bottom line. In the center of the page, there is a rectangular box with a thin border containing the text '10-11' in red.

10-12

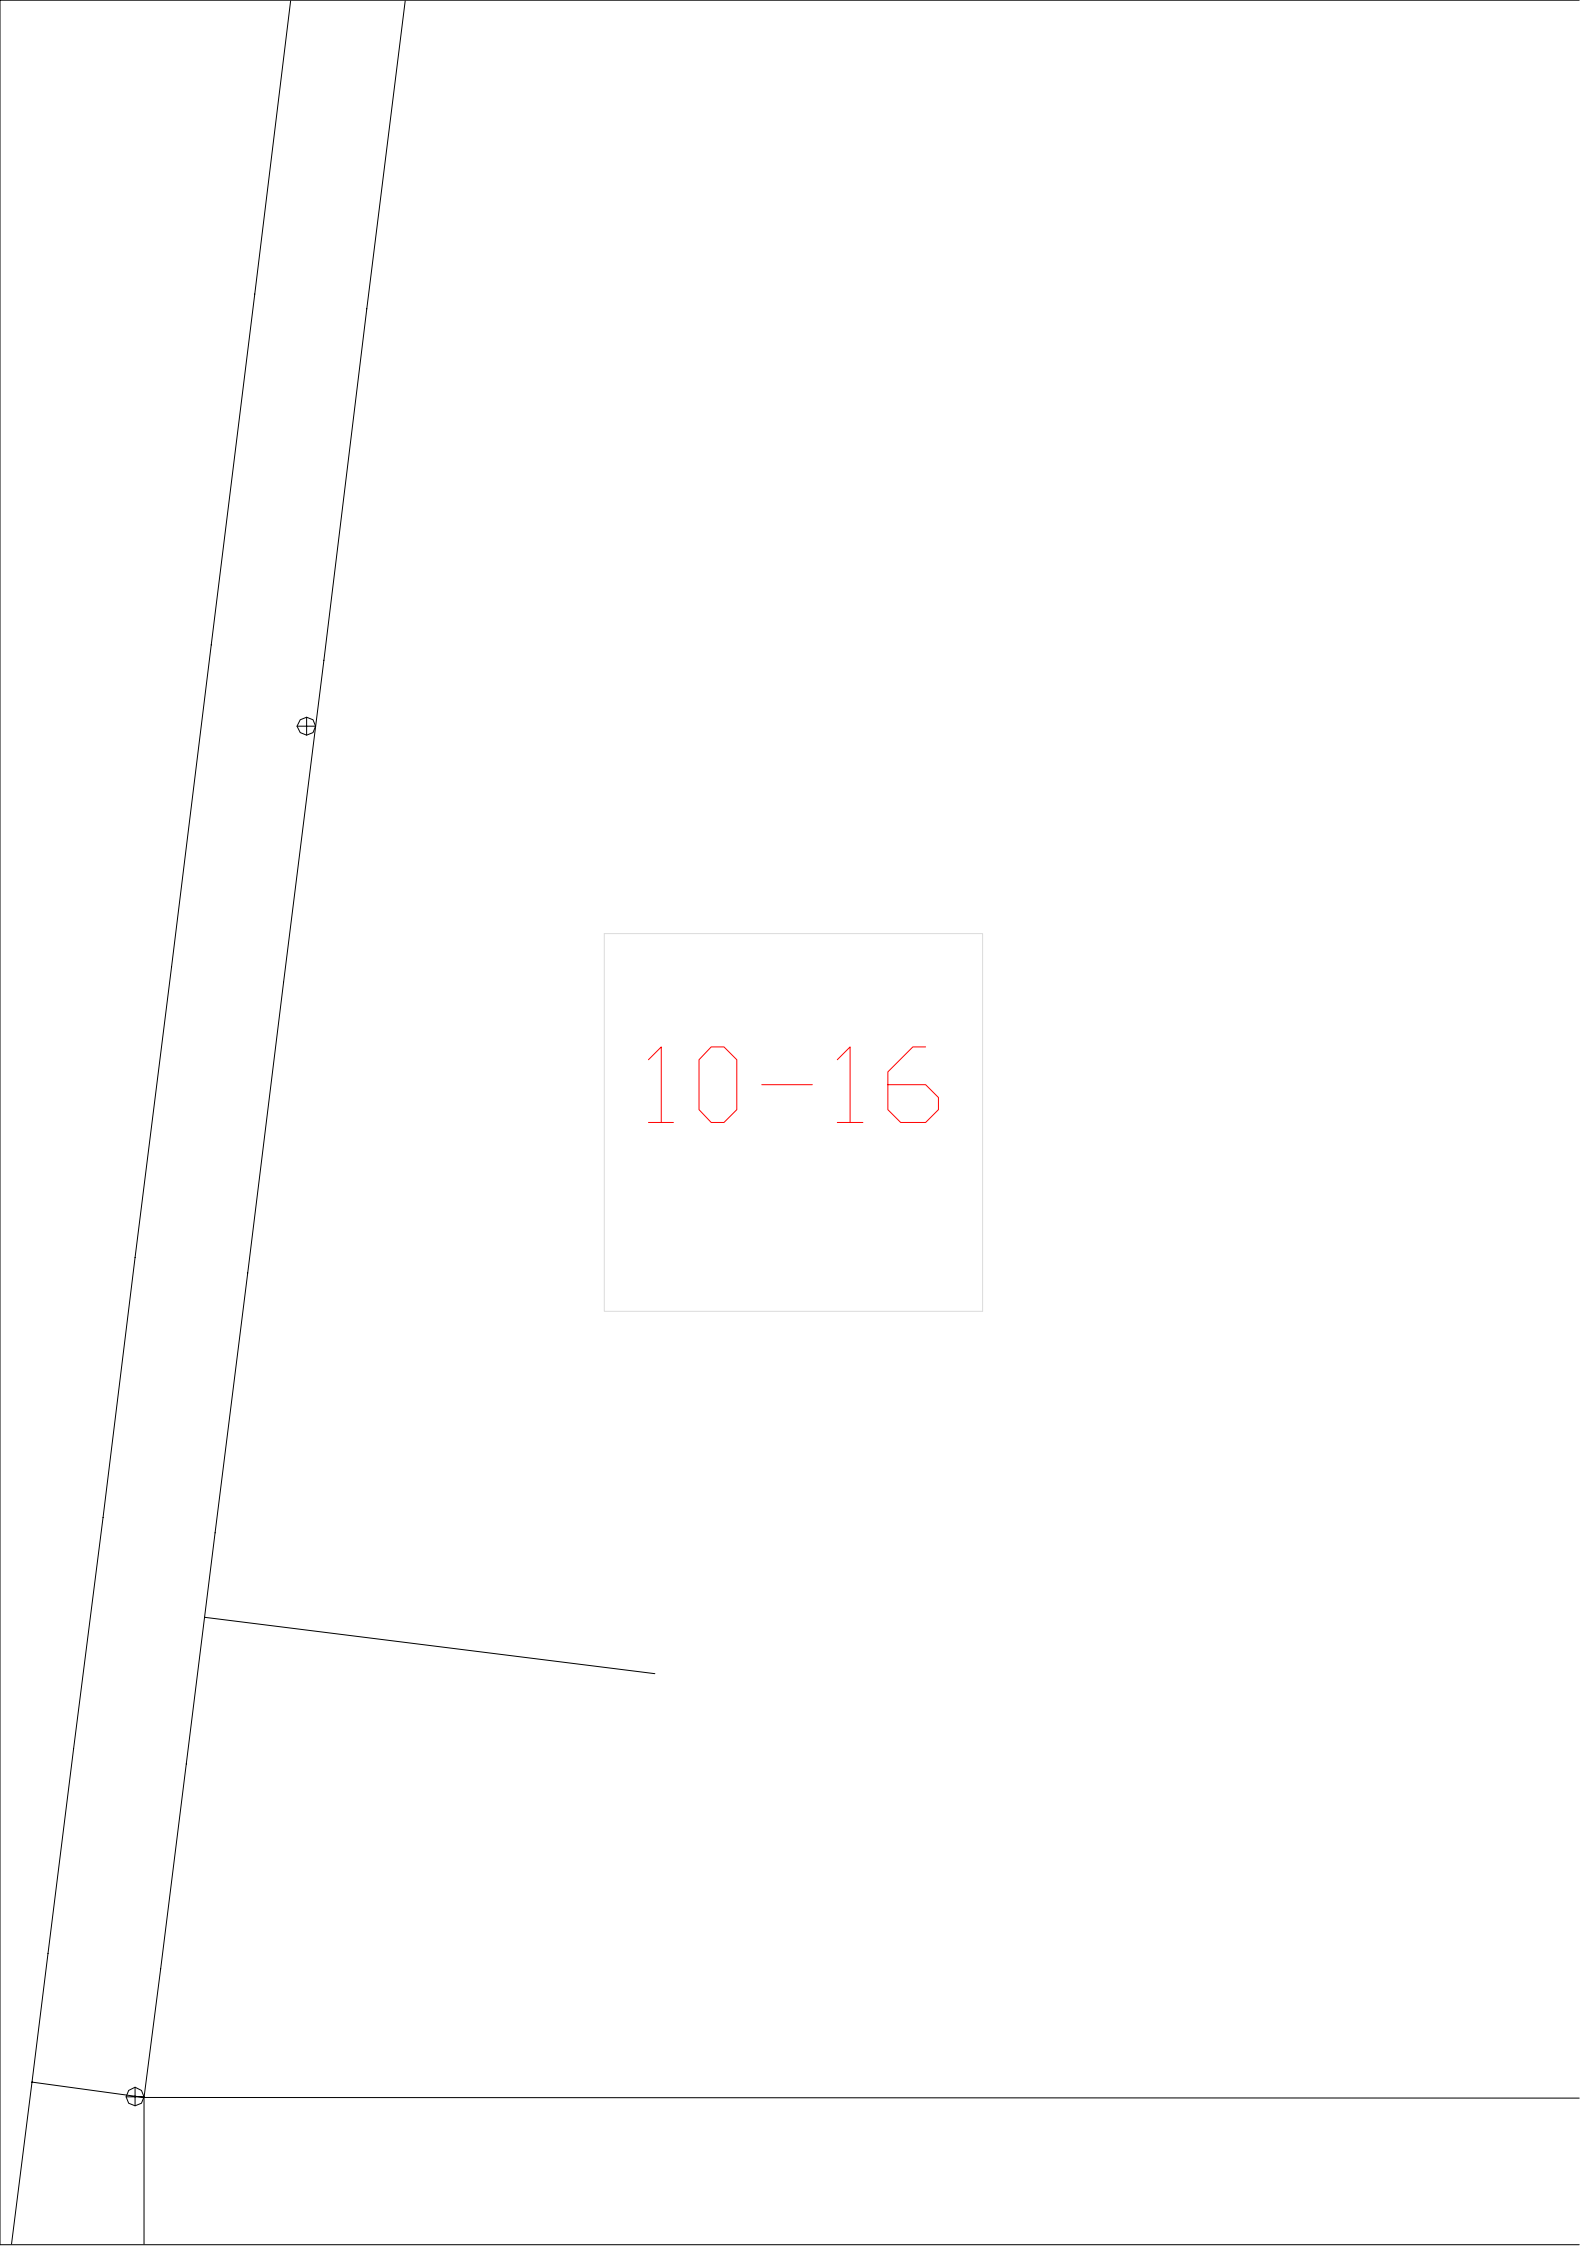

10-13

10-14

10-15

The image shows a technical drawing of a tapered shaft. The shaft is represented by two parallel lines that converge towards the top, indicating a taper. A light blue rectangular box is drawn around the middle section of the shaft, containing the text "10-15" in red. This text likely represents the diameter range of the shaft in that section. There are two small circles with a plus sign inside, one on the upper part of the shaft and one on the lower part, possibly indicating specific features or measurement points. A horizontal line extends from the left side of the shaft to the lower circle, and another horizontal line extends from the left side to the upper circle. The drawing is on a white background with black lines.

10-16

The image shows a technical drawing of a mechanical part, possibly a shaft or a rod, with a central section highlighted by a light blue box containing the text "10-16". The drawing includes several lines representing the geometry of the part, including a vertical line on the left, a horizontal line at the bottom, and a diagonal line extending from the bottom left towards the top right. There are two small circles with a cross inside, one near the top left and one near the bottom left, which likely represent specific features or dimensions of the part.

The image shows a technical drawing of a tapered shaft. The shaft is represented by two parallel lines that converge towards the right, indicating a taper. A central hole is shown as a thin line running through the shaft. A rectangular feature is drawn on the shaft, with the text '10-22' inside it. There are two small circles with a plus sign inside, one on the shaft and one on the rectangular feature. A horizontal line is drawn at the bottom of the shaft, and a vertical line is drawn from the bottom of the shaft to the center of the rectangular feature.

The image shows a technical drawing of a mechanical part. A vertical shaft on the left is connected to a horizontal arm that tapers to the right. A section line is drawn across the arm, with a small circle at the intersection. A rectangular callout box is positioned above the arm, containing the text '1-12' in red. The drawing is composed of black lines on a white background.

A diagram consisting of several lines. A horizontal line is slightly sloped downwards from left to right. A vertical line is positioned to the right of the center. A second horizontal line is parallel to the first, located below it. A small circle is drawn at the intersection of the two horizontal lines. A rectangular box is drawn below the upper horizontal line and to the left of the vertical line. Inside the box, the text '1-7' is written in red.

A diagram consisting of several thin black lines. A vertical line runs down the left side. A horizontal line runs across the top. A diagonal line runs from the top center towards the bottom left. A vertical line runs from the top center down to the bottom center. A horizontal line runs from the top center to the right edge. In the top right corner, there are three small circles arranged horizontally. In the center, a light blue rectangular box contains the text "2-18" in red.

The image shows a technical drawing of a corner joint. A vertical member on the left and a horizontal member on the top meet at a corner. A small circle with a cross inside is located at the intersection. A rectangular callout box with a thin border is positioned below the corner, containing the text '2-20' in red. The drawing is composed of black lines on a white background.

A technical drawing of a vertical shaft. The shaft is represented by two parallel lines that are slightly tapered. A horizontal line extends from the left side of the shaft, intersecting it. A rectangular box is drawn around the shaft, containing the text '6-13' in red. Below the box, a small circle with a plus sign is drawn on the shaft.

⊕

6-14

A technical drawing of a tapered shaft. The shaft is shown in profile, tapering from left to right. The right end of the shaft is chamfered. A callout box, outlined in light gray, is positioned to the right of the shaft, containing the text '6-14' in red. A small circle with a crosshair is located on the shaft's surface, approximately one-third of the way from the left end.
