The image shows a technical drawing of a mechanical part, possibly a bracket or a support arm, rendered in black lines. The part has a long, angled section and a shorter, perpendicular section at the top right. A small circle with a cross inside is located at the junction of these two sections. A light gray rectangular callout box is positioned in the middle of the long section, containing the red text '2-9'.

A diagram showing a parallelogram formed by two parallel lines sloping upwards from left to right. A smaller rectangle is drawn inside the parallelogram, with its sides parallel to the horizontal and vertical axes. The intersection of the left side of the rectangle and the lower-left boundary of the parallelogram is marked with a small circle containing a plus sign. The number 4 is written in red at the top-left corner of the rectangle, and the number 7 is written in red at the top-right corner. A horizontal red line segment connects the two numbers.

$$4 - 7$$

+

The diagram shows a channel defined by two parallel lines sloping downwards from left to right. A light blue rectangular box highlights a section of the channel. Inside this box, the text "4-8" is written in red. Below the box, on the lower boundary line, there is a small black circle with a plus sign inside it.

The image shows a technical drawing of a rectangular feature. The feature is a rectangle with a light blue border, centered in the upper half of the page. Inside the rectangle, the text '5-13' is written in red. Two center marks, each consisting of a small circle with a cross inside, are located on the top and bottom edges of the rectangle. The drawing is set against a background of several parallel lines that are slightly angled, suggesting a perspective or a specific orientation of the object. The lines are thin and black, and they run diagonally across the page.

5-14

5-15

The image shows a technical drawing of a corner. The corner is chamfered with a 45-degree angle. A chamfered hole is located in the corner. The hole is also chamfered with a 45-degree angle. The text '5-15' is written in red in the center of the drawing. A small circle with a cross inside is located on the lower right edge of the drawing.

A technical drawing of a tapered shaft. The shaft is shown in perspective, tapering from left to right. The left end is chamfered. A small circle with a cross inside is located on the shaft's surface. A rectangular callout box is positioned to the right of the shaft, containing the text '5-4' in red.

The image shows a technical drawing of a trapezoidal part. The part has a vertical left edge, a vertical right edge, and two slanted top edges. A rectangular feature is centered on the part, containing the text "6-12". A small circle with a cross inside is located on the right slanted edge, with a leader line pointing to it from the right.

A technical drawing of a rectangular plate with a hole. The drawing is oriented vertically. A hole is located on the left side of the plate. The hole is represented by a circle with a cross inside, indicating a hole diameter. The hole diameter symbol is located at the bottom left of the drawing. The hole is positioned in the lower-left quadrant of the plate. The drawing is a simple line drawing with no shading or color. The hole is a circle with a cross inside, and the hole diameter symbol is a circle with a cross inside. The hole is located on the left side of the plate. The hole diameter symbol is located at the bottom left of the drawing. The hole is positioned in the lower-left quadrant of the plate. The drawing is a simple line drawing with no shading or color. The hole is a circle with a cross inside, and the hole diameter symbol is a circle with a cross inside. The hole is located on the left side of the plate. The hole diameter symbol is located at the bottom left of the drawing. The hole is positioned in the lower-left quadrant of the plate.

A technical drawing of a mechanical part, possibly a shaft or a rod. The drawing shows a cylindrical section on the left with a hole through its center. The hole is defined by two concentric circles. The outer circle is labeled with a diameter symbol (a circle with a horizontal line through it) and the number 7. The inner circle is labeled with a diameter symbol and the number 2. The part has a chamfered edge on the right side, indicated by a line that tapers from the outer diameter to a smaller diameter. The drawing is oriented vertically on the page.

The image shows a technical drawing of a mechanical part, possibly a bracket or a support, with a central label. The drawing is composed of several lines forming a complex shape. The central label is a white rectangle with a thin black border, containing the text "9-10" in red. The drawing is divided into two main sections by a vertical line. The left section shows a vertical line on the far left, a horizontal line at the bottom, and a vertical line extending upwards from the bottom horizontal line. A diagonal line starts from the top left and goes down to the right, meeting the vertical line. Another diagonal line starts from the top left and goes down to the right, meeting the vertical line. A horizontal line connects the two vertical lines. A small circle with a cross inside is located at the intersection of the vertical line and the horizontal line. The right section shows a vertical line on the far right, a horizontal line at the bottom, and a vertical line extending upwards from the bottom horizontal line. A diagonal line starts from the top right and goes down to the left, meeting the vertical line. Another diagonal line starts from the top right and goes down to the left, meeting the vertical line. A horizontal line connects the two vertical lines. A small circle with a cross inside is located at the intersection of the vertical line and the horizontal line.
