

The luff lines prevent deflations on the sail.
 If any deflation occurs, the trailing edge remains high,
 creating a reflex profile. They also facilitate the departure of the dives.
 Do not fly without luff lines installed.

LUFF LINES A,B,C,A',B',C'
 LUFF LINES D,D': kevlar ϕ 1.5 mm
 (lengths between theoretical points of anchorage)

LUFF LINES ADDED 2008-01-06
